

Earth Saving Rules

AFFORDABLE AND
CLEAN ENERGY

Always use 'clean' energy sources over fossil fuels, fossil fuels should always be the last resort and renewables the preferred option

ON TRACK FOR
A SUSTAINABLE FUTURE

RESPONSIBLE
CONSUMPTION
AND PRODUCTION

Always use materials and resources responsibly and use circular economy principles keeping products in use for as long as possible

CLIMATE
ACTION

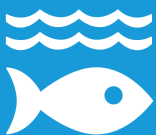

Always conserve energy, water and fuel by turning off equipment, heating and lighting when not in use and use low carbon, energy efficient equipment wherever possible

GOOD HEALTH
AND WELL-BEING

Always respect the communities in which we work by minimising noise, vibration, dust and light intrusion on site

LIFE
BELOW WATER

Always report a spill or leak of a polluting substance no matter the quantity

Investigating minor incidents can prevent bigger ones from happening

LIFE
ON LAND

Never undertake vegetation clearance unless the appropriate habitat/species checks have been carried out and stop works if you unexpectedly encounter any species on site

SUSTAINABLE CITIES
AND COMMUNITIES

Always ensure we provide positive effects on the communities in which we operate – use local suppliers and labour, 'volunteer' in the community, regenerate the environment
